

What is DeepHow?

DeepHow is an AI solution for capturing and training skilled trades. It is a video platform and app that allows organizations to record, upload, and use AI to convert their processes into easily understandable steps for their multilingual workforce. Workers can quickly learn and upgrade skills through these videos.

Why it matters:

Traditional text-based learning is inefficient and workers prefer learning from videos. DeepHow makes video content creation easy and economical, allowing teams to learn directly from experts without needing professional production equipment.

Tools required:

- Blue Parrot B-450-XT Noise Canceling Headphone
- Tablets or Smartphones (Android or Apple)
- DJI OM 5 Gimbal for steady shots and tripod (optional)

How it works:

DeepHow enables teams to capture their know-how using a smartphone or tablet, turning expertise into step-by-step how-to videos that can be translated into multiple languages in a matter of minutes. Easily create a unique and extremely valuable library of organizational knowledge that can be effectively transferred to every worker with DeepHow's AI-powered video training platform.
